DETAILED ACTION

Information Disclosure Statement

The IDSes filed 7/8/2003 and 9/29/2003 both have been considered and placed of record. The initialed copies are attached herewith.

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1 and 8-16 are rejected under 35 U.S.C. 102(a) as being anticipated by GOLLOMP et al. (US 6,424,157). The reference discloses a method and system for monitoring the state of charge of a battery having, *inter alia*, a voltage calculating means for establishing the instantaneous change in voltage of the battery, a current calculating means for establishing the instantaneous change in current. The dynamic change of the internal resistance (IR) is calculated from dividing the resulting current by the

resulting voltage. See column 12, line 50 to column 13, line 25. A temperature detector 130 is woven into the system to detect the temperature change in the battery.

Allowable Subject Matter

Claims 2-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art made of record fails to disclose or suggest the detector further determines the battery is fully charged when the IR has decreased by a predetermined value following a positive to negative shift of the rate of change of the IR.
